EDUCATION

The University of Alabama — **Tuscaloosa, Alabama**

B.S. in Computer Science, Minor in Robotics — *May 2027*

- **GPA: 4.00/4.00**, 4-time President's List*, University Honors Scholar, Emerging Scholar*
- **Achievements:** Google Summer of Code (**GSoC**), ICPC SEC finalist, **Google** Code-in winner, UGAHacks winner
- **Related Coursework:** Artificial Intelligence, Reinforcement Learning, Brain Computer Interface, Data Science

EXPERIENCE

Shipt — **Birmingham, Alabama**

Backend & AI Engineer Intern (Marketplace, Search, and Payments) — *June 2026 - August 2026*

- Built company's **AI coding-agent harness** on Pi runtime, packaging reusable skills, agents, prompts, declarative profiles, scaling adoption to **70%** of engineering teams and delivering **2-3x** token efficiency.
- Co-developed next-generation **E-commerce Search** using agentic search, prompt engineering, cache optimization, and multi-model orchestration to improve relevance, latency, and personalization.
- Launched an **AI Cart Builder** that automates multi-item cart creation from complex intents, slashing workflow time by **97%** (20+ mins to ~30s) by eliminating manual search-to-cart navigation.

Backend Engineer Intern (Payments) — *June 2025 - August 2025*

- Built **GenAI chatbot** in Go and Ollama from scratch with custom vector store, semantic search, and ranking algorithm, delivering a **12x** more cost-efficient solution and earning recognition from the VP of Engineering.
- Integrated **Stripe** refunds into core services and streamed events to Kafka data lake, supporting **100K+** requests/year.
- Designed GraphQL mutations for bulk reorders and resolved coupon-redemption failures.

Center for Advanced Public Safety — **Tuscaloosa, Alabama**

Software Engineer — *August 2024 – May 2025*

- Developed geospatial data-entry automation platform to replace manual labelling, saving over **$100K** in annual costs.
- Built web-based analytics platforms to visualize Alabama eCrash data across **67 counties**, supporting **170+ divisions**.
- Automated data collection, feature extraction, and dashboard updates for internal users.

Google Summer of Code (Postman) — **Remote**

Software Developer (Open Source) — *May 2024 – August 2024*

- Developed CLI source generator for Corvus.JsonSchema that automates standards-compliant code generation via Corvus APIs, achieving **200+** GitHub stars.

Human Technology and Interaction Lab, The University of Alabama — **Tuscaloosa, Alabama**

Research Assistant — *Jan 2024 – Present*

- Built TensorFlow-based HCI platform that processes **EEG/EMG** signals for real-time movement and emotion detection.
- Co-developed NeuroScope, a BCI app for controlling **Robots via brain waves**, and published the associated K-12 educational research at **CHI 2025** in Japan.

PROJECTS

CRISPRR.bio (live at crisprr.bio) — **Athens, Georgia**

- Gene editing platform that converts gene sequence into **CRISPR** guides, 3D molecular models, and experiment-ready outputs in **~5 seconds**, replacing **4–24 hours** of work across bioinformatics tools.
- Scaled to **150+** users within the first month of launch, securing partnership interest from **$6B+** YC-backed company.

MindBeats | Lifeline (github) — **Athens, Georgia**

Winner, HackUGA 10 & 11 — *Feb 2025 & Feb 2026*

- MindBeats: Built a custom CNN model that recommends music from moods inferred from real-time brain signals.
- Lifeline: Built an AI second responder that answers emergency calls, dispatches resources, and escalates critical cases.

Dubverse (live at dubverse.ai) — **Delhi, India**

Artificial Intelligence Developer — *Oct 2021 – Oct 2022*

- Led a six-person team building Image & Voice AI products and image-text labeling interfaces for a **$30M** startup.

SKILLS

Programming: Golang, Python, TypeScript/JavaScript, SQL, C/C++, React, Next.js, Node.js, FastAPI, GraphQL, gRPC
AI & Backend: AI Agents , MCP , AI Coding Harness, LangGraph, LangChain, RAG, LLM Evaluation, Vector DBs
Cloud & Infrastructure: AWS, Docker, Kubernetes, Terraform, Kafka, Redis, PostgreSQL, MongoDB, Git, Linux, GCP, Azure
